Verifying your Document Status & Viewing the Audit Trail or Authoring History.....	11

Introduction:

This document provides a summary of the various document statuses in **SOLABS QM** and covers the process for revising an existing document. To revise a document in **SOLABS QM**, you will need at least **Modify** privileges.

Document Statuses in SOLABS QM:

The following table describes the various **Document Statuses**, as well as the visual clues that provide information to you about the status of the document you are viewing.

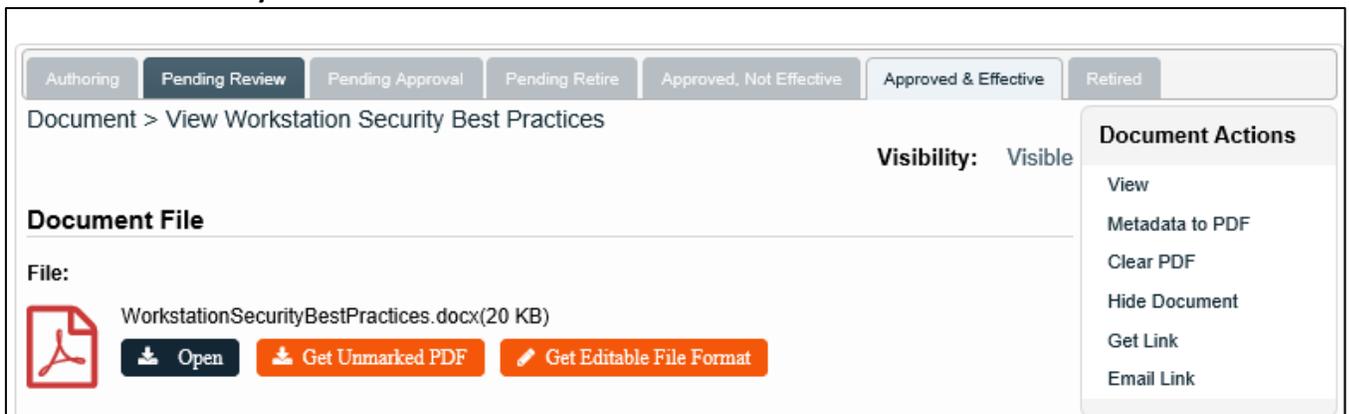

Document Status	Meaning
Authoring	This Document is in the process of being written or revised. At this stage, it does not yet have official Status , and, depending on your configuration, is only available, visible and/or editable to Document Coordinators (and related Roles) and/or the Author .
Pending Review	This Document is in an active Review Cycle and is Awaiting Review from one or more of the assigned Reviewers .
Pending Approval	This Document is in an active Approval Cycle and is Awaiting Approval from one or more of the assigned Approvers .
Pending Retire	This Document is in an active Retire Cycle and is Awaiting Retire Status from one or more of the assigned Retirers .

Approved, Not Effective	The Approval Cycle for this Document is complete. It is now Approved , but has not yet been made Effective . The only remaining steps for this document are for the Document Coordinator to change the status to Effective , or for a pre-determined Effective Date to be reached.
Approved & Effective	This is the current, official version of this Document — it has been put to a status of Effective by a Documentation Coordinator or has reached the pre-determined Effective Date and has automatically been made Effective .
Retired	This Document has been retired from active use and is therefore no longer Effective . It is archived and can be retrieved through the Audit Trail in case it ever needs to be re-activated and/or used partially or wholly in another Document .

Document Status Tabs – Visual Indication of Status

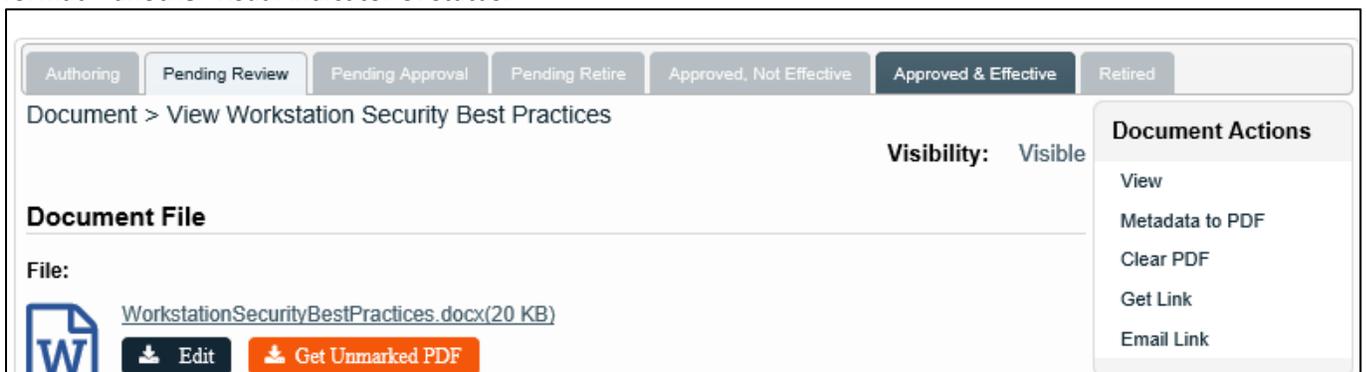

Document life cycle status tabs are visible at the top of a **Document** screen, whether in **View** mode or in **Modify** mode. The light grey tab indicates the status of the version you are currently viewing or working on. A dark grey tab indicates another status of the same document.

In this example, the information for the **Approved & Effective** version of this document is being viewed. The dark grey color of the **Pending Review** tab indicates that another version of this document is in progress and is in an active **Review Cycle**.

The screenshot shows a document interface for 'Workstation Security Best Practices'. At the top, a row of status tabs is visible: 'Authoring', 'Pending Review' (dark grey), 'Pending Approval', 'Pending Retire', 'Approved, Not Effective', 'Approved & Effective' (light grey), and 'Retired'. Below the tabs, the document title is 'Document > View Workstation Security Best Practices'. To the right, 'Visibility: Visible' is shown. A 'Document Actions' dropdown menu is open, listing: 'View', 'Metadata to PDF', 'Clear PDF', 'Hide Document', 'Get Link', and 'Email Link'. Under 'Document File', the file 'WorkstationSecurityBestPractices.docx(20 KB)' is shown with a Word icon. Below the file name are three buttons: 'Open', 'Get Unmarked PDF', and 'Get Editable File Format'.

You can toggle back and forth between the two active statuses by clicking on the light grey and dark grey tabs. NOTE: The **Approved & Effective** version is in PDF file format while the **Pending Review** version is in Word format – another visual indicator of status.

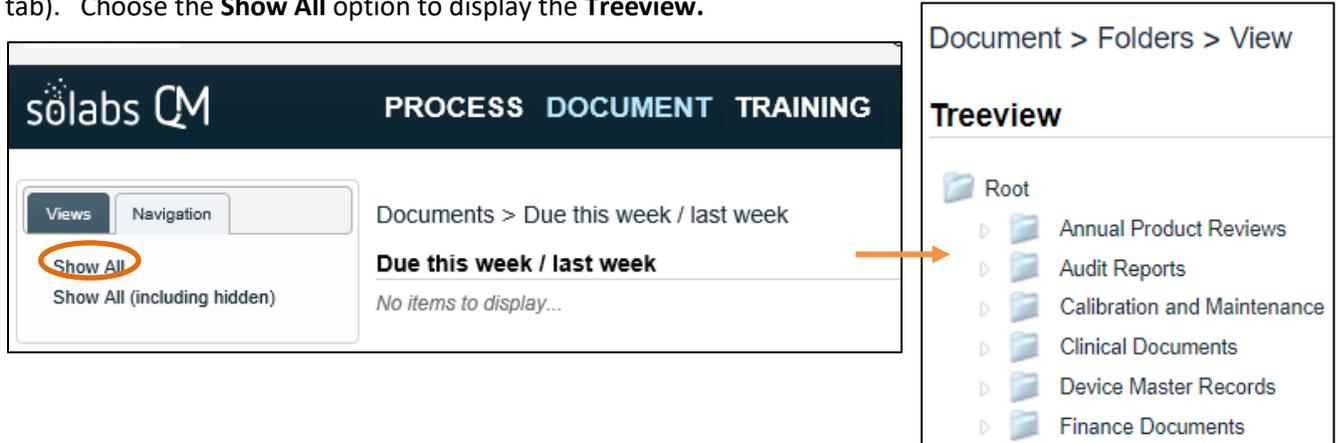

The screenshot shows the same document interface as above, but with the 'Pending Review' tab selected (dark grey) and the 'Approved & Effective' tab (light grey) unselected. The 'Document File' section now shows a Word icon and the file name 'WorkstationSecurityBestPractices.docx(20 KB)'. Below the file name are two buttons: 'Edit' and 'Get Unmarked PDF'. The 'Document Actions' dropdown menu remains open with the same options as in the previous screenshot.

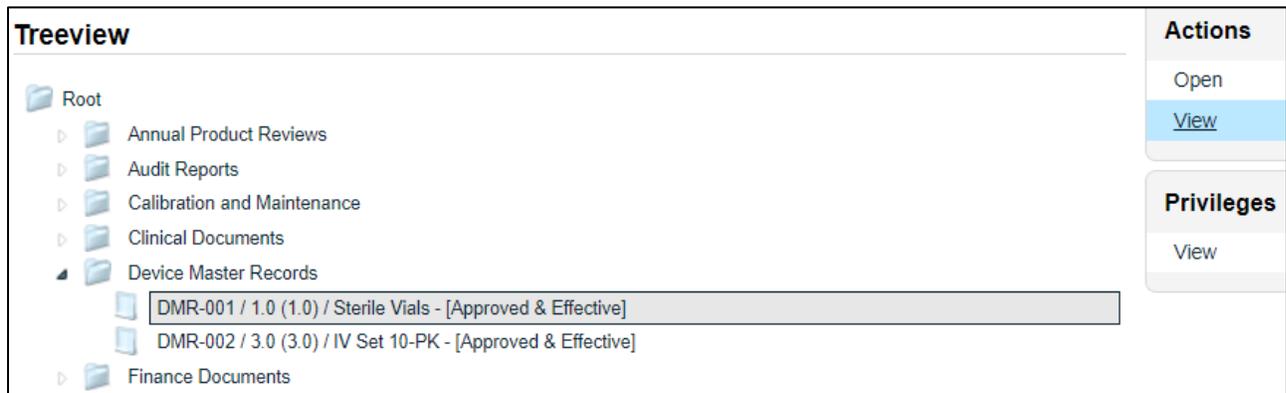

Revising a Document

Locating the Document

As a user with at least Modify privileges, choose **DOCUMENT** from the main menu at the **SOLABS QM Home** page. Click on the **Navigation** tab on the left-hand side of the screen (light blue color indicates it as the active tab). Choose the **Show All** option to display the **Treewiew**.

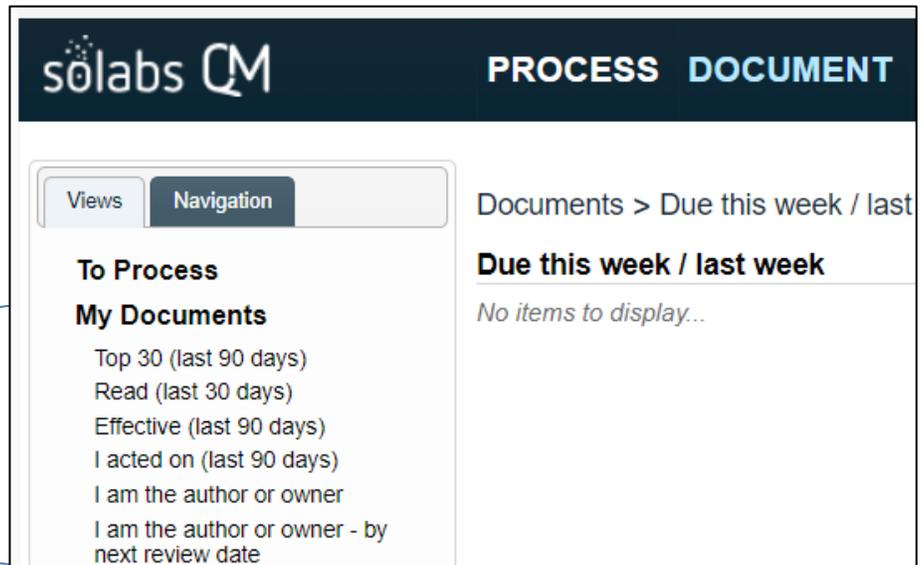

Open the folder location for the document you wish to revise. Locate the document and highlight it. Double-click the listing or click **Actions > View** to get to the **Document View** screen for the document, where you will have access to all of the related metadata fields.

You can also use the **My Documents** option on the **Views** tab on the left-hand side in the **DOCUMENT** Section or the main **Search** field at the top of the screen.

You may also have received an email **Notification** that included an embedded link to the document.

Modifying the Document

Once you have located your document, double-click the listing or click on the **View** option to open the **Document > View** screen. The document must be in **Approved & Effective** status in order for you to initiate another version.

Click **Get Editable File Format** to get an editable copy of the current version. When asked if you'd like to **Open** or **Save** your document, click **Open**, and then **Save As** to your desktop or a network location intended for this purpose. You are now able to make changes to the **Document**, generating your new version.

NOTE: To ensure your revisions are visible to later Reviewers, make sure to turn on **Review > Track Changes** (a **Word** function; not a unique **SOLABS QM** capability).

In **SOLABS QM 10.5** or higher, a **Compare** file will automatically be created to compare the current version to the new version, alleviating the need to use Track Changes.

On the **Document View** page in **SOLABS QM**, click the **Modify** option on the right-hand **Document Actions** menu.

The **Document File Modify (Document > Main Page > Modify)** screen appears.

NOTE: The Drag & Drop section is new with **SOLABS QM 10.5**. Earlier versions will have an option to Browse for the file (that you previously saved to your desktop or network location for editing).

NOTE two important things at this point:

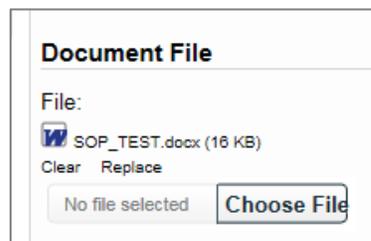

- 1) The metadata fields are for the next version of the document (Version 2 in this example) that you are modifying and that you will shortly upload. **You will need to change the Version field manually** from 1.0 to 2.0 but the greyed out **Internal Version** and **Current Version** fields are recognizing the versioning of the document.
- 2) The **Authoring** Status Tab at the top of the page is **pale grey** to indicate this latest status.

Replacing the Current Document with your New Version

If you are using SOLABS QM version 10.5 or higher, click the **Remove** option under the title to remove the file associated with the existing version. You can then drag/drop your file from the location you saved it to earlier.

If you are using an earlier version of SOLABS QM 10, you'll see a **Clear** and a **Replace** option under the title in the **Document File** section. If you click on **Replace**, you can search for your modified document and upload it.

Entering the Document Metadata

The following table provides information regarding the metadata fields associated with document Standard Attributes in **SOLABS QM**.

- Required fields will be identified with asterisks.
- Additional Standard Attribute and System Attribute fields may have been created by your **System Administrator** for each **Document Type**. Those will be unique to your workplace so are not included in the table below.

Field	Requirement	Notes
Document Type	This field will default to the Document Type of the current, effective version of the document and will usually not be changed.	You do have flexibility to change this field should the Document Type change for some reason in the future.
Name	This field will default to the Name of the current, effective version of the document but can be changed if necessary.	You may already have naming conventions at your place of work that you obey as part of the workplace compliance standards.
Description	This field will default to include the	This field is not mandatory but can be helpful to

	same information as the current, effective version of the document but can be changed is necessary.	provide context for those viewing the document.
Version	This field must be edited manually to the next highest version.	The Unique ID, Internal Version and Current Version fields are read-only and are maintained by the system.
Control Number	This field will default to the Control Number of the current, effective version of the document and will usually not be changed.	You may already have document numbering conventions at your place of work that you obey as part of the workplace compliance standards. During SETUP of each Document Type , your System Administrator or Document Administrator will have established whether the Control Number will be auto-generated or not, unique or not and whether the previous number will be displayed for reference.
Effective Date	The Effective Date option will default to that of the current, effective version of the document but can be changed for each revision if appropriate. The options may vary by Document Type and will have been established when setting up that Document Type .	You may have Effective Date conventions for each Document Type at your place of work. During SETUP of each Document Type , your System Administrator or Document Administrator will have established the Effective Date options such as the date of approval, a set number of days after approval (perhaps for a training period), option for a specific date or option to have it set through the Document Control Process .
Periodic Review Cycle “Document Life Cycle” in versions 10.7 and lower	The Periodic Review Cycle options/fields will default to those of the current, effective version of the document but can be changed if appropriate. The Period Review Cycle (“Life Cycle” in versions 10.7 and lower) is the time (in months) after which a document should undergo a Periodic Review. The Planned Review Task Duration (in months) is the time ahead of life cycle at which that activity will start.	During SETUP of each Document Type , your System Administrator or Document Administrator will have established whether there will be a Periodic Cycle . If it is not required, this field can be set as “N/A”.
Location	The Location will default to that of the current, effective version of the document. It usually won’t change but is editable.	To change the Location , click on “Available Folders” under the field. Search criteria will then be displayed to search for folders by Treeview Level .
Publishing Type	The Publishing Type will default to that of the current, effective version of the document and usually won’t change.	The options are Publish in non-editable format (PDF) or Publish in editable format (original) .

Reason for Change	Include any information that would be helpful later to those reviewing the document.	This is an optional field but is useful, especially if you are not using the SOLABS QM Document Control Process to more formally include change control information.
Document Ownership	The Document Ownership fields – Originator (Author), Document Owner and Document Coordinator can be populated with appropriate Users/Roles. If you are the Author of this revision, choose yourself for that field.	These fields are again set up for each Document Type during SETUP by your System Administrator or Document Administrator . If they are established as required for that Document Type, they will be enabled for entry of information. If they are established as not required for that Document Type, they will be grayed out and do not need to be used.
Due Dates on Workflow	The Due Dates on Workflow checkbox is usually not checked, but must be checked if you plan to use the Delay to review/approve option when establishing Review and Approval Cycle workflows.	If you will not be the person managing the Review and Approval workflows, check with your Document Coordinator to know if they plan to use Due Dates when establishing the Review and Approval Cycle workflows.

As mentioned above, there may be additional **Standard Attribute** and **System Attribute** fields that you need to enter information for if they have been established for this **Document Type** by your **System Administrator** or **Document Administrator**.

Attaching Related Items

While authoring a document, a Related Items section is available on the right-hand side that allows the linking of other documents within SOLABS QM 10 as a **Referred Document**, **Superseded Document** or **Reason for Change** (a Process). There are also menu options available to **Modify Description** of the related documents or to **Remove Links** to the related documents. The Modify Description and Remove Links options will also apply to other Related Items such as a related Document Control Process.

Related Items

For either linked documents or processes, the **Modify Description** option allows you to modify the description of the attached document or process. All Related Items will be listed with a **Modify** option.

For either linked documents or processes, the **Remove Links** option allows you to modify the description of the attached document or process. All Related Items will be listed with a **Remove** option.

After all required information is entered, click **Submit**, check your work, and then click **Confirm**. The document is now saved as the next version and will be ready for the **Author** or the **Document Coordinator** to initiate **Review/Approval Cycles**.

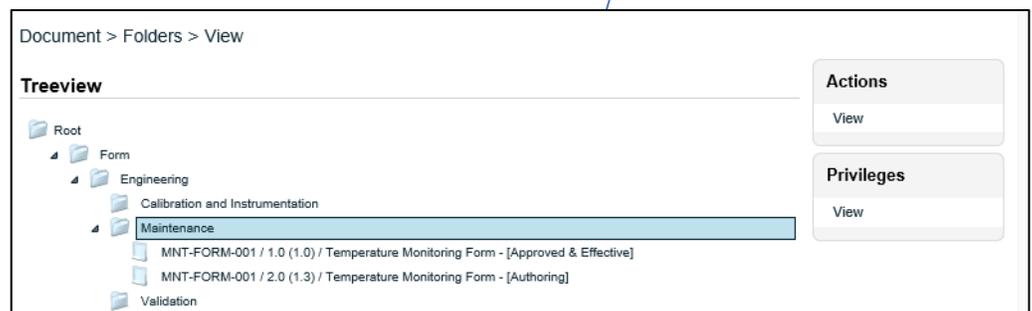

Verifying your Document Status & Viewing the Audit Trail or Authoring History

After the new version of your **Document** is saved, click the **Related Information > Audit Trail** link on the right-hand side of the page. The information for the past and the current, effective versions will be displayed but there is nothing in the trail for your new version because it is a brand new. That will be in the **Authoring History**.

Click the **Related Information > Authoring History** link to see information on any incremental **Internal Versions** you may have created/saved before finishing and Submitting your work.

To access your document at any time from within the **DOCUMENT Section** click the **Navigation tab** on the left-hand menu and then choose **Show All**. The **Treeview** hierarchical document folder structure will be displayed. Go to the folder location for your document and you should see the new version with **(Authoring)** after it.

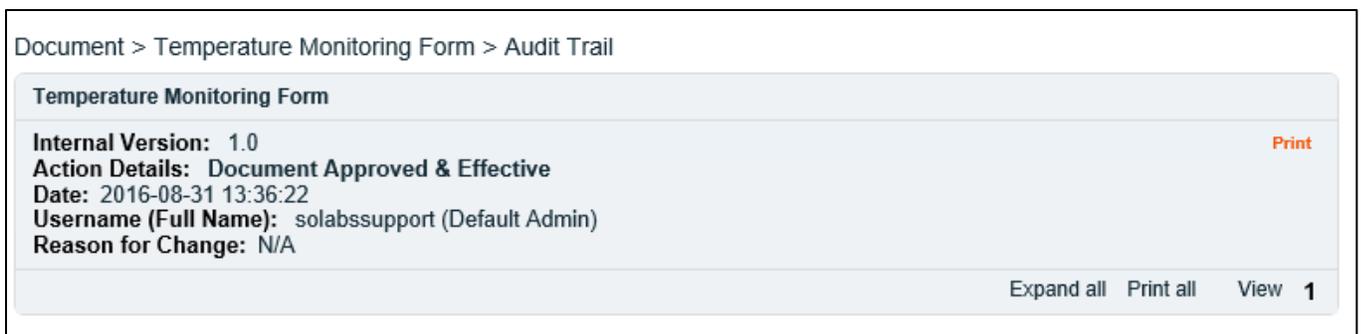

Highlight your version then either double-click the title or choose **Actions > View** to open the **Document File > View** screen. From there you can view the **Audit Trail** or **Authoring History** under **Related Information**, as described above.

The **Audit Trail** and the **Authoring History** displays include an **Expand all/Collapse all** toggle option. Clicking on **Expand all** will display all the metadata associated with each of the listed versions.

When multiple versions are listed, you can view the metadata for just one version by simply clicking on the listing.

There are also options to **Print all** and to **Print** individual document information. Choosing these options opens a Print to PDF dialog box, allowing you to save the printout to an external location.
